BLACKWOOD
Innovation, Reliability, Operational Excellence
At Blackwood Solutions, we’re committed to a culture of problem-solving. We take pride in our ability to quickly adapt to an ever-changing market while maintaining a constant, singular focus on getting the job done. We define success by providing our customers with solutions that are practical, safe, and cost-effective.

More than a consulting firm, Blackwood also provides all equipment and manpower to deliver real-world results for the solutions that it prescribes. Blackwood’s successful wood recycling and disposal programs have been presented at numerous industry events such as the SPTA Eastern Pole Conference, Investment Recovery Association, and Electric Utility Sustainable Supply Chain Alliance.

While headquartered in south-central Indiana, we have managed individual projects from Florida to California and everywhere in between.

Blackwood Solutions is committed to putting its resources where it belongs; on its fantastic employees and top-shelf equipment. Blackwood proudly admits that its employees are its most valuable asset and their commitment to quality customer service separates Blackwood from all competition.
Blackwood Solutions is a multi-disciplined transportation and material management firm uniquely positioned to diagnose and resolve our customer’s toughest logistic challenges. Using our fleet of more than 35 semi-trucks in tandem with more than 50 trailers, Blackwood hauls more than 50,000 tons of product on an annual basis.

Our customers include organizations in the electric utility industry, manufacturing industries, and major storm-response contractors.

Specific services Blackwood currently performs include: Wood pole recycling, pallet recycling, reel recycling, concrete recycling, wood and fuel supply management, pipeline clearing, utility right-of-way clearing, land clearing, new pole hauling, rail terminal transloading, waste auditing and consulting, hurricane and disaster response, bulk transportation, and material staging services.

CARBONIZING SERVICES
UTILITY POLE DELIVERY
RAILROAD RECYCLING

NATURAL DIASTER REMEDIATION
UTILITY POLE RECYCLING
INDUSTRIAL WOOD RECYCLING
BIOCHAR

Why is Biochar so Important?

Climate Change & Greenhouse Gases
What is Biochar?

Biochar is the stable solid product remaining after wood and vegetation has been carbonized. It is the carbon that remains after the process of thermal conversion or pyrolysis.

Biochar, a porous material, can help retain water and nutrients in the soil for the plants to take up as they grow. It can also act as a filter for water and air.
Is Biochar Something New?

It may seem like something new but there is evidence it was used thousands of years ago in the Amazon Basin as a method to enhance soil.

Terra Preta
Applications

- Soil Amendment
- Remediation of Soil
- Landfill Leachate Treatment
- Remediation of Water
- Compost Additive
- Diversion of Biomass from Landfills
- Feed Supplement
- Litter Additive
- Wellness
- Emission Control
- Air Filtration
- Forest Management
